

Vitec

'Eezy Feeder'

Animal Lick Station

NEW

Discover the new Eezy Feeder at Vitec!

Makes Life Easier!

The Eezy Feeder by Vitec is a revolutionary idea, creating a smart alternative to the drench gun. It saves time, effort, and money – drenches can cost hundreds, also, **it doesn't waste valuable Trio unlike drench guns and their wasted oil residue.** It can be used with many different animals, and can **be filled with Vitec's celebrated Trio stock supplement** (Minkel, cod liver oil and cider vinegar). So sit back, relax, and let the animals do it for you!

- Animals lick the roller balls and consume the liquid
- No more Drenching
- Suits 2-500 lambs, 2-350 sheep
- No more oil residue in drench guns
- Holds 1-17L liquid stock supplements
- 23 year plastic warranty
- Saves time

- Saves money– no drench guns, & no product gets wasted
- Sheep, goats, alpacas, calves, cattle, pigs & more
- Easy to carry & move
- Easy to fill with Vitec Trio or other Vitec stock supplements
- Easy to train stock to use

"I think the Eezy Feeder is a good investment.
I was looking for a way to administer small, equal amounts of Vitec Trio (Vitec liquid kelp and Vitec Apple Cider Vinegar with a trace of Vitec Cod Liver Oil).

The Lick feeders are doing this nicely, as opposed to the alternative of yarding and drenching.

Vitec Trio is a very helpful general tonic, there has been claims of better fertility, easier lambing, helps preg. toxemia, less disease problems and a boost to **their vigour."**

Malcolm Jarred Nhill,
VIC.

When first introducing the Eezy Feeder to your animals, train them to use it by just simply placing a salt lick over it (as pictured below)

Or

Pour a small amount of molasses onto the floating balls.

Remove salt/molasses when stock actively use rollers.

Placement of Eezy Feeder

- NOT under a tree, this prevents leaf litter clogging the roller
- On a tyre/s for easier farmer & animal access
- Use SHORT star pickets through centre holes. This stops stock from playing footy with the Eezy feeder and is for ease of lifting to shake or move Eezy Feeder
- Avoid use during heavy rainfall, to prevent dilution of Trio.

After the Eezy Feeder is in position, pour mixed Trio over the roller balls and fill until desired

Malcolm Jarred's sheep enjoy using the Eezy Feeder. (salt lick for training)
